Description

The stove is manufactured from 100% cast iron.

The clean glass system slows deposit buildup on the glass. An air supply above the glass creates a protective curtain. The preheated air is propelled along the glass. It triggers combustion of gas and volatile materials, thereby protecting the glass against smoke and soot deposits.

The supplementary air intake in the back enables hydrocarbons to be destroyed at a high temperature. Complete combustion reduces pollution.

Power modulation: 8 - 18kW, nominal power 12kW

Heated volume 160 - 360 m³, heated surface 65 - 145 m²

Maximum log length 71 cm.

Chimney is connected at the top.
