Description

The stove is manufactured from 100% cast iron.

The clean glass system slows deposit buildup on the glass. An air supply above the glass creates a protective curtain. The preheated air is propelled along the glass. It triggers combustion of gas and volatile materials, thereby protecting the glass against smoke and soot deposits.

The supplementary air intake in the back enables hydrocarbons to be destroyed at a high temperature. Complete combustion reduces pollution.

Power modulation: 6,5-15kW, nominal power 10kW

Heated volume 135-300 m³, heated surface 55-120 m²

Maximum log length 40 cm.

Chimney is connected at the top.

Combustion chamber is lined with vermiculite bricks.
