Efficiency: 66
Made of:
Chimney diameter, mm:
Item type:
Warranty, year: 3
Capacity of stones, kg: 50
Saunos tūris, m³: 24

Description

ETNA - 22 wood-burning stove of traditional Finnish design for medium-sized saunas. This type of stove can be loaded with large quantities of stones and has an insulated combustion chamber, so the steam generated by these stoves is extremely gentle and even.

The combustion chamber of the stove is made in such a way as to use the energy given off by firewood as efficiently as possible. Installing additional air ducts in the stove creates an efficient combustion process that generates more energy from the same amount of firewood. In this way, nature is less polluted, because the energy obtained from firewood is burned and not removed through the chimney.

ETNA - 22 has a front door glass that will allow you to admire the burning fire while you are warming up in the sauna. A chimney-mounted water tank for hot water can also be installed on this type of stove. For your convenience, it is possible to change the side of the door opening.

The recommended min - max size of the sauna room is m³: 10 - 24;

The position of the smoke outlet: top / end.
