Efficiency: 66
Made of:
Chimney diameter, mm:
Item type:
Warranty, year: 3
Capacity of stones, kg: 100
Saunos tūris, m3: 13

Description

The wood-burning stove for medium-sized saunas. This stove has an outside firebox which means you can load the wood from the outside of the sauna. This type of stove can be loaded with large quantities of stones and has an insulated combustion chamber, so the steam generated by these stoves is extremely gentle and even. The combustion chamber of the stove is made in such a way as to use the energy given off by firewood as efficiently as possible. Installing additional air ducts in the stove creates an efficient combustion process that generates more energy from the same amount of firewood. In this way, nature is less polluted, because the energy obtained from firewood is burned and not removed through the chimney. Fornax - 14 has an extended front door glass, which will allow you to admire the burning fire from outside of the sauna. A chimney-mounted water tank for hot water can also be installed on this type of stove. For your convenience, it is possible to change the side of the door opening. Dimensions - (width x length x height) mm: 420 x 440+180 x 670; Water tank capacity: top / end
